Current Concepts Of Somatization Research

Somatization is a tendency to experience and communicate psychological distress in the form of somatic symptoms and to seek medical help for them. More commonly expressed, it is the generation of physical symptoms of a psychiatric condition such as anxiety. The term somatization was introduced by Wilhelm Stekel in 1924.. Somatization is a worldwide phenomenon.

Somatization - Wikipedia

Somatic anxiety is the physical symptoms of anxiety, such as butterflies in the stomach. It is also known as somatization. It is commonly contrasted with cognitive anxiety, which is the mental manifestations of anxiety, or the specific thought processes that occur during anxiety, such as concern or worry. These different components of anxiety are especially studied in sports psychology ...

A series of seven studies was conducted by the authors and their colleagues to produce an efficient measure of service satisfaction that can easily be related to symptom level, demographic characteristics, and type and extent of service utilization.

Assessment of patient satisfaction: Development and ...

Psychological evaluations are routinely submitted in support of applications for "extreme hardship" waivers of inadmissibility. Yet despite widespread use, practitioners must rely on their own experience and anecdote to gauge whether such an evaluation will be worth its substantial expense to a client.

Using psychological experts to prove extreme hardship ...

Ego-State Therapy: An Overview by Helen H. Watkins, April 1993

INTRODUCTION — Functional movement disorders (FMDs) are clinical syndromes defined by the occurrence of abnormal involuntary movements that are incongruent with a known neurologic cause and are significantly improved on neurologic exam with distraction with or without nonphysiologic maneuvers []. This definition replaces the previous one that considered FMDs to be "psychogenic movement disorders" and ...
