Prostate cancer, which is now the most common malignancy in men with a 1 in 14 lifetime risk, rising to 1 in 11 for men over 50 years of age Prostatitis, an inflammatory disease affecting about 1 in 15 mainly younger and middle-aged men, which is characterized by symptoms of pain and discomfort around the anus, scrotum and the area in between (the perineum).

Common prostate diseases | The Prostate Centre

Prostate cancer is one of the most common types of cancer in men. Usually prostate cancer grows slowly and is initially confined to the prostate gland, where it may not cause serious harm. However, while some types of prostate cancer grow slowly and may need minimal or even no treatment, other types are aggressive and can spread quickly.
